Audi

Poole Audi case study

Audi is a global manufacturer of cars that embody technological perfection. Success is built on core values of creativity, commitment and enthusiasm, and by keeping customers' desires at the heart of everything.

Poole Audi is the only Audi- approved Centre in Dorset and West Hampshire, and strive to lead the way through constant innovation, setting new standards that define Vorsprung durch Technik.

Poole Audi—A Summary

The Challenge.

- Optimise available space.
- Provide engineers with a zero footprint work station that supports LCD monitor keyboard and mouse.

The Solution.

- ErgoMounts Ultra 110 combination LCD monitor, keyboard and mouse wall mount solution: EMUL110WMQ1-0-3

The Challenge

Poole Audi provides onsite servicing and repairs to clients within Dorset and West Hampshire. The complexity of modern vehicles requires many thousands of individual components along with detailed installation guides. The challenge was to provide Poole Audi with compact workstations that would not interfere with the already crowded workbench areas. This would allow engineers access to up to date components and installation guides along with allowing the integration of new audit trail procedures. Wall mounting was the preferred option as this would produce a zero footprint.

The Solution

ErgoMounts is a specialist manufacturer and distributor of mounting solutions for LCD monitors and accompanying peripherals. The Ultra 110 series of LCD monitor and keyboard mounts was selected as this provided support for both monitor, keyboard and mouse in the most compact space available. By wall mounting all three components Poole Audi were able to provide their engineers with a solution that did not interfere with their already busy work areas. The EMUL110WMQ1-0-3 provides both height, tilt and rotational adjustment of the LCD monitor, left or right handed mouse usage and the ability to flip up the keyboard and mouse tray when not in use to save even more space.
